Neural Network Zoo - Repository Index

This repository contains PDF files only, as requested. Start here, then open the file for the contribution you need.

Michael Rivas - start here

Rivas_A03_Finalized.pdf is Michael Rivas's individual contribution: notebook author, layout and zoo tour design, compilation of team findings, and submission / instructor communication lead for Team 3.

All files in this repository

- Rivas_A03_Finalized.pdf - Michael Rivas, Integration / Notebook Author & Submission Lead
- Cherluk_A03_Finalized.pdf - Cherluk, Data Engineering & Preprocessing
- Olu_A03_Finalized.pdf - Olu, Neural Architecture & Computational Demonstration
- Taki_A03_Finalized.pdf - Taki, Interactive Exhibits, Gallery & Evaluation

What the project is

A03 Neural Network Zoo (ITAI 2376): a notebook that introduces neural networks, presents seven animal-architecture pairings as a safari/zoo tour, includes an interactive group activity, and ends with reflection. It includes a working computational demonstration: a Leopard 1D CNN and a Parrot LSTM on a synthetic burst-detection task, with saved test results of 98.00% and 48.50%.

The project video already submitted in Canvas is A03_Team_3_Rivas_ITAI2376.mp4. Video is not included in this PDF-only repository.

How to use this repository

1. Open Rivas_A03_Finalized.pdf for the submitter's contribution. 2. Open the other three PDFs for each teammate's individual contribution. 3. The notebook itself is A03_Neural_Network_Safari_Deck_Notebook.ipynb, as submitted in Canvas; this repository is the PDF document set requested by the instructor.
